

NITRATE Fx

ADVANCED
REGENERABLE
NITRATE CONTROL

- ◆ Prevents Algae Overgrowth
- ◆ Reduce and Extend Maintenance Intervals
- ◆ Regenerable Multiple Times
- ◆ Safe and Effective Way to Lower Nitrates

Container Sizes: 250 ml/500 ml

Any of our Blue Life USA resins can be regenerated with the use of Regen Fx for reuse 6 or more times.

One 250ml **Regen Fx** regeneration kit can regenerate up to 4 250ml bags of any of the Blue Life USA Regenerable Resin lines.

250 ml Treats 125 Gallons (475 liters)

500 ml Treats 250 gallons (945 liters)

Use in **Fresh** or **Salt** to safely reduce nitrates and aid in water clarity.

Nitrate Fx	Product Number	MSRP
250ML	OO358	\$ 28.99
500ML	OO359	\$ 52.99

Instructions and Guidelines

Prior to first use, rinse each bag of resin by passing a steady stream of fresh water (RO Preferred) 4 to 5 cups approximately; discard water once completed.

Each 250ml of **Nitrate Fx** will remove 10ppm nitrate in 125 US-gallons of water (or 5ppm per 250 US-gallons) and 500ml will remove 10ppm nitrate in 250 US-gallons of water (or 5ppm per 500 US-gallons).

Removal is directly related to resin contact time with water; maximizing contact time with water will remove more nitrates and aid in the overall quality of aquarium water. For best results, resins should be used inside a reactor or a pressurized canister.

Nitrate Fx is regenerable multiple times, making it a cost

effective means for reduction of nitrates in marine and freshwater aquariums.

Regeneration Instructions

Dissolve 1 Blue Life USA Regeneration Kit into 1/2 gallon of room-temperature water per 250-ml of resin to be regenerated in a clean pail; place resin into pail and stir; allow Nitrate Fx to soak at least 1 hour (for best results soak overnight) frequently agitating the bags; then remove from regeneration solution and rinse thoroughly in fresh water before re-using. Do not regenerate with bleach, this will permanently damage the adsorption resin and could kill aquarium inhabitants.

Caution: Resin sold moist. Keep closed to prevent drying. Weight varies due to moisture content, product is sold by volume rather than weight. **DO NOT LET RESIN DRY OUT!**
